Course Instructor: Engr Daniel Moune

Documentation For Personelle Management System

Managing employees in a way that brings out their best has become a top priority for almost every organization. From streamlining HR operations to [improving day-to-day employee management practices](#), companies have been trying out different ways to refine the employee experience. If you're looking to better support your employees, you'll definitely want to adopt a comprehensive and intuitive employee management system

Consist of the following:

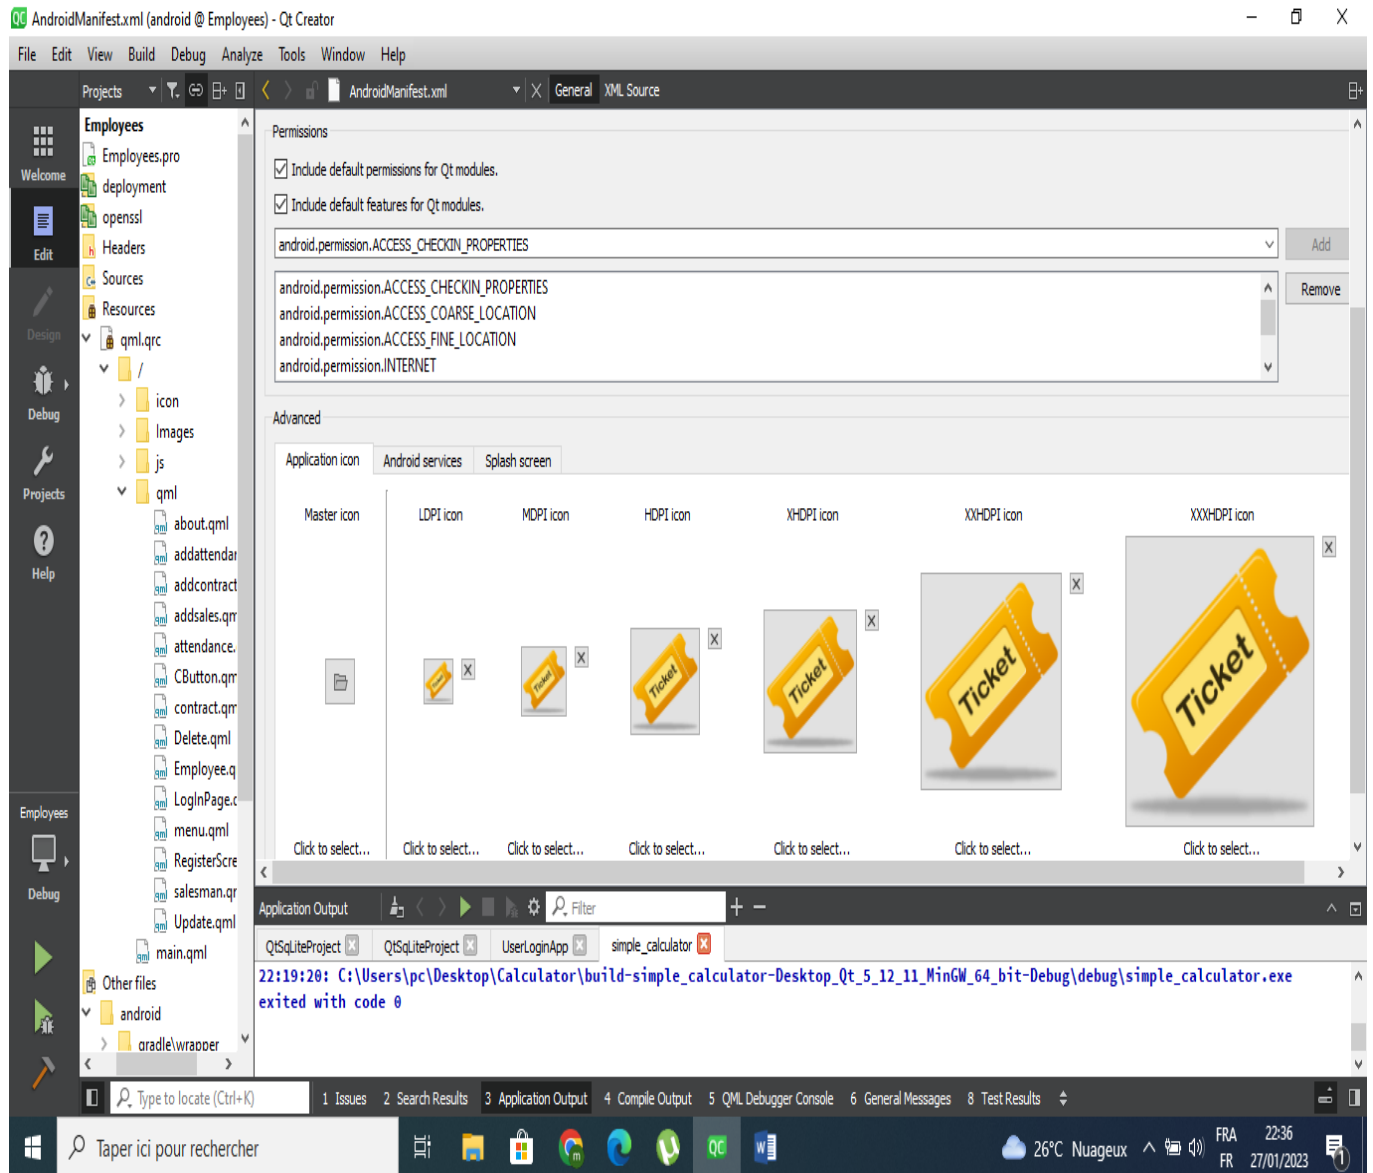

An Employee database management

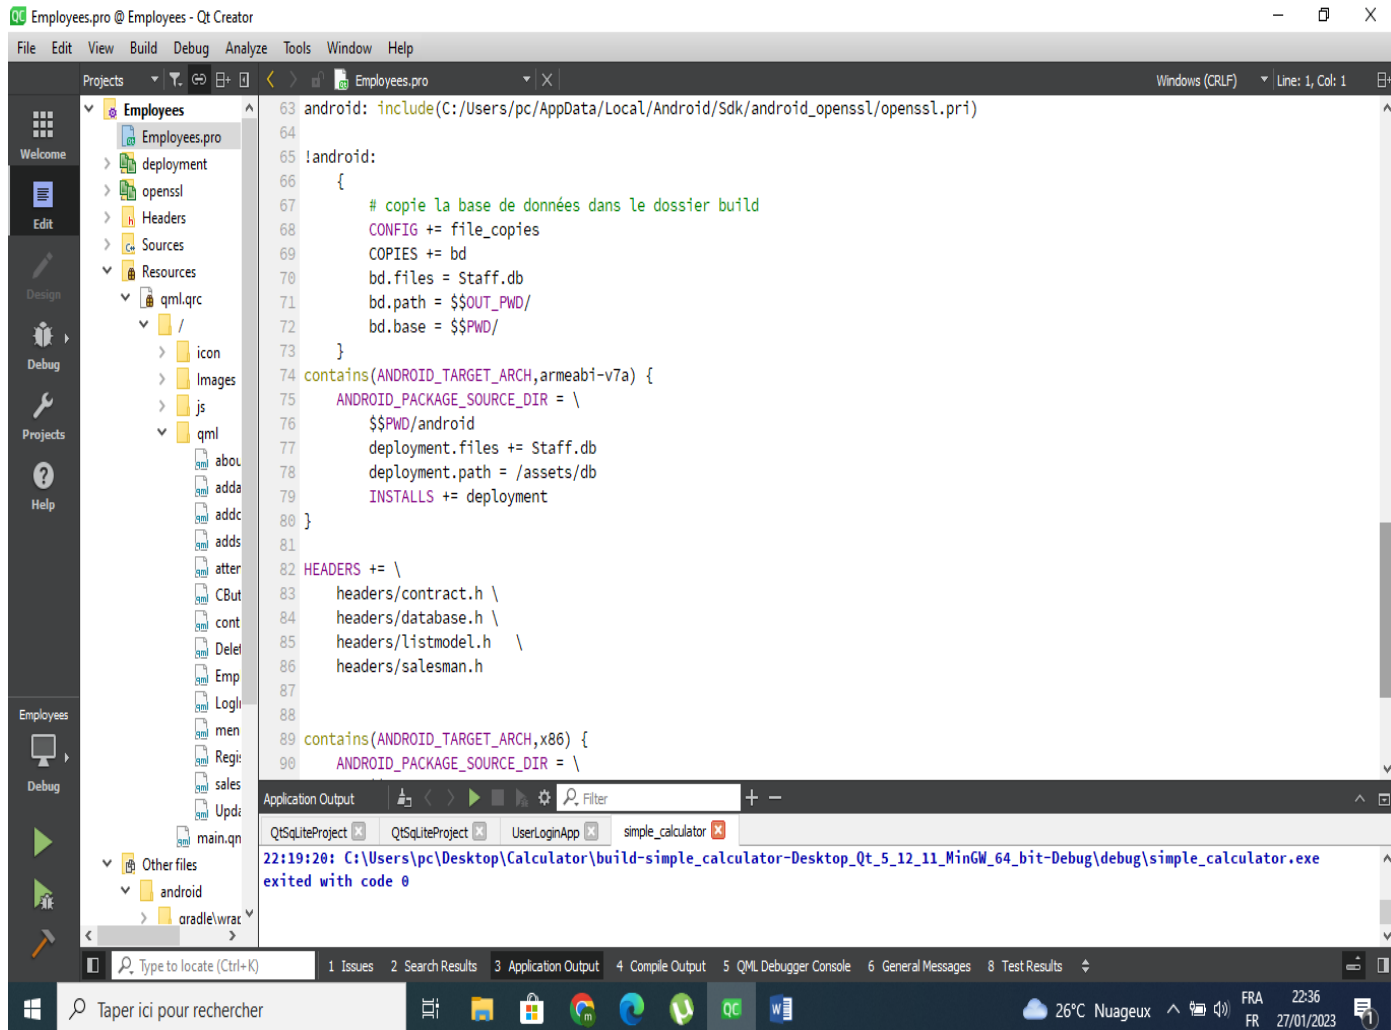

The system uses a sqlite database that allows you to centralize HR data for every department, region, and business entity. With this feature, you can manually add employee details in just a few steps, or sync the data from compatible third-party applications. A great system will allow you to classify your employees based on department, location, and designation for easy data management. Employees can also access and edit their personal information to ensure error-free records.

Time, attendance, and leave management

The employee management system should help your organization [streamline and automate time management operations](#). It should come with a robust attendance and management system that enables employees to mark their attendance and make leave requests from wherever they work. A great system will help you stay on top of every employee's check-in time, check-out time, overtime, leave balances, on-duty information, and user permissions. Plus, it's ability to collect accurate attendance and leave data can simplify payroll calculation. Your employee management system should also include online timesheets so employees can log the time they spend on different projects.
